

100% PURE COLOSTRUM

100% Pure Colostrum is a natural food. Actually it is the first food taken by babies, puppies and kittens.

It would be hard to imagine any nutritional substance more beneficial.

The Colostrum Cocktail

100% Pure Colostrum's Growth Factors-Not Just for Newborns

100% Pure Colostrum contains many important growth factors which promote healing and actually create an anti-aging response. Independent medical studies show that colostrum's growth factors: 1) Regenerate and accelerate normal growth of aged or injured muscle, bone, cartilage, skin collagen and nerve tissue; 2) Help burn fat for fuel instead of muscle tissue; 3) Help build and retain lean muscle; 4) Repair the body's vital DNA and RNA; 5) Balance and regulate blood sugar levels; 6) Heal burns, surgeries, cuts, abrasions, ear infections and mouth sores with topical application; 7) Control infection and pain associated with gingivitis and sensitive teeth; 8) Stop leaky gut syndrome; 9) Balances brain chemical levels.

100% Pure Colostrum and the Immune System

100% Pure Colostrum contains immuno-regulatory factors (Immunoglobulins, Lactoferrin, Cytokines and Interferon) as well as PRP (Polyproline-Rich-Peptides), which enhance the immune reaction when it is too low and suppress it when it is too high. This is important during those times when the immune system is extremely depressed, as in severe bacterial, viral, fungal infections, poor diet, vaccinations and is also true in cases where the immune response is generally excessive in inflammation and destruction as in rheumatoid arthritis, lupus, multiple sclerosis, Chronic Fatigue Syndrome, Alzheimer's disease, allergies etc.

Allergies that can often be alleviated by giving 100% Pure Colostrum are: watery eyes, runny nose, sinus stuffiness, asthma, hives, eczema, hot spots, rashes, high blood pressure, abnormal fatigue, abnormal hunger, stomach cramps, vomiting, anxiety, depression, aggressiveness, constipation, hyperactivity, wheezing, etc.

Susceptibility to an allergen depends on heredity and the condition of one's immune system. Stress and adrenal exhaustion, poor diet, deficiency of vitamins B and C, poor elimination, emotional trauma, infections and vaccinations can weaken the immune system making one more susceptible to an allergic reaction.

Infants, puppies and kittens who are breast-fed have a lower frequency of allergic, inflammatory and autoimmune diseases and lymphomas, not only during nursing, but in their later life as well.

Bacterial and Viral Protection from 100% Pure Colostrum

Most infectious microorganisms enter the body through the mouth and are swallowed. How well we know with children, cats and dogs. Everything goes in the mouth! Whether or not one can defend themselves against these invaders which surround all of us depends on the health of the immune system. Normally the immune system is able to properly fight these off. Some people and animals are not so lucky. It seems they catch every bacterium, virus and fungus that comes their way.

MDs and DVMs have gotten into the unforgivable habit of prescribing antibiotics for everything that enters the office. Between 80-90 percent of these ailments are caused by viral infections and an antibiotic is not going to do any good. Antibiotics are also responsible for creating new and unusual challenges for the immune system.

Antibiotics, vaccines and other drugs disrupt the normal harmonious relationship in the body. 100% Pure Colostrum offers safe viral and bacterial protection. Dozens of scientific papers suggest that 100% pure colostrum can block or reduce the severity of a wide variety of infections including many of which have their initiation in the oral/fecal route. 100% Pure Colostrum is effective against a number of microorganisms including E coli, streptococcus, salmonella, bordetella, respiratory viruses, yeasts such as candida, to name a few. 100% Pure Colostrum can be used as a safe, effective alternative to antibiotics, steroids and vaccines.

100% Pure Colostrum and Weight Loss

100% Pure Colostrum contains IGF-1, the most powerful growth factor in the body. Medical research has shown that without adequate amounts of IGF-1, the body, during times of fasting or dieting, will burn muscle protein before they burn fat (catabolism). The only means to increase IGF-1 levels in the body is through daily aerobic exercise or colostrum (preferably both). The IGR-1 and other growth factors in 100% pure colostrum help burn fat and build lean muscle mass.

How To Take 100% Pure Colostrum

100% Pure Colostrum works best on an empty stomach. Do not take any other supplements at the same time that you take colostrum and wait at least twenty minutes before eating. It has a pleasant taste (similar to skim milk) so the powder can be mixed with a little water and your animal will often lick it up; if not, give with a syringe or mix the colostrum in a little butter, just enough to get them to take it.

Each animal is unique with regard to the amount of 100% pure colostrum they need. Start with the suggested use on the bottle label.

100% Pure Colostrum can be consumed in any quantity without side effects or drug interactions. Because 100% pure colostrum helps heal the bowel, this means you are better utilizing the nutrients from the food you and your animals eat and the supplements and medications that are taken. This can reduce or even eliminate the need for many additional supplements and medications. Animals who are lactose-intolerant should have no problems with high quality colostrum because it is a food and not a milk.

Flying Basset 100% bovine 100% Pure Colostrum is produced from healthy, nutritionally-supplemented cows raised in America's Heartland on USDA and FDA certified dairy farms. These free-range cattle are, in addition, carefully fed a scientifically-designed diet that contains the proper balance of legumes and grasses along with minerals to ensure a consistently high potency 100% pure colostrum. Our 100% Pure Colostrum is superior because calves that are born in the winter months in the northern United States must survive bitter sub-zero temperatures, the cold northwest winds and the damp, moist conditions in the barn in their first days of life. The 100% pure colostrum produced by their vigorous mothers must be the richest in immunoglobulins and other important immune and growth factors in order for their newborn to survive.

We leave the fat in our 100% Pure Colostrum which is extremely important for the effectiveness of 100% pure colostrum. Many companies are taking out the fat because they want to present a "fat free" product according to the present trends. Fat, especially from such a pure source, is necessary for our bodies as well as our dogs and cats.
