

Yeast Infection

An Insidious Disease

**The Flying Basset Organics
eBooks**

The main cause of yeast infections, such as Candida Albicans, is from grain-based foods and drugs, chemicals and poisons.

Dogs were never meant to eat grains. Their main diet in the wild is raw meat and vegetation. The only grains they ever get are already predigested in the stomach or the bowels of their prey. Cooked foods anything in a can or a bag, vaccines which compromise and destroy the natural immune system, antibiotics which kill the friendly bacteria which would ordinarily fight and overwhelm the yeast, steroids that shut down the body's ability to fight back, and any and all other drugs, chemicals and poisons, including frontline, advantage, program, heartguard, etc, that compromise the immune system are all additional reasons for seeing such a preponderance of yeast infections. Yeast infections seem to be one the most under-diagnosed illnesses in the veterinary field.

Symptoms include: chronic ear infections; incessant licking of the genitals or the paws or both; lick granulomas; habitual scratching, usually the ears, sides of the torso and underbelly; rashes, most often on the underbelly; and when the yeast begins to move into the head; loss of hearing; loss of eyesight; loss of balance; obsessive behaviors such as walking in circles, doing good or bad behaviors redundantly; loss of intelligence, memory and comprehension. Yeast infections always start somewhere in the digestive system; then move to the genital area, on to the ears; then finally to the brain, taking over the entire body. It is insidious. Very often these problems are treated with antibiotics or steroids, which only make matters worse.

Rather than dwelling on what causes the problem, let's discuss how to get rid of this insidious ailment. This is one situation that does not get better by itself or by waiting to see what is going to happen.

Immediately you need to get your dog on raw meat, vegetables, PC Calcium Complex, Daily Maintenance Animal Complex and Vitamin C Complex to provide a healthy diet for him/her to be able to resist the yeast infection and the parasites.

1) Do not feed anything that contains grains, dairy, fruits, rawhide, pigs ears, plastic or nylon bones, pressed treats or dog biscuits.

2) Do not give any drugs, chemicals or poisons, including vaccines, frontline, advantage, heartguard, antibiotics, steroids, antihistamines, et al.

All of the above will only exacerbate the symptoms of the yeast infection.

With all dogs who have a yeast infection or a predisposition to it, they must be on the raw food program and none of the above foods or drugs for their entire life. It is similar to being an alcoholic: one sip of liquor will send an alcoholic right back into all the cravings and problems. This is true of the dog with a yeast infection. Any of the above foods, treats or drugs will bring back the yeast with a vengeance.

In addition to the raw food program with the organic supplements: PC Calcium Complex, Daily Maintenance Animal Complex and Vitamin C Complex, I would give the following 100% Pure Colostrum Cocktail:

The 100% Pure Colostrum Cocktail

The 100% Pure Colostrum Cocktail is a combination of products that build the immune system by providing all the supplements necessary to help digest, absorb, assimilate and utilize nutrients, so the body can restore itself to a healthy state.

The ingredients are:

100% Pure Colostrum which is the first food that comes from the mammary glands right after birth and before the milk comes in. It is full of immunoglobulins, the immune builders.

Digestive Enzymes Complex, providing the necessary nutrients to break down all the other nutrients. Enzymes also eat the sheath of cancer cells and destroy dead cancer cells, so in the case of cancer it is suggested to double the amount of enzymes given.

PC CoQ10, a high-potency antioxidant with a myriad of helpful assets, two of them being that it balances the pH of the system, and it converts free radicals into water that is absorbed at the cellular level.

Crystal Energy is a sister product to MegaHydrin that lowers the surface tension of water and in turn helps the body to absorb and utilize water more effectively. This would be included in the 100% Pure Colostrum Cocktail if the animal were dehydrated which is often the case with kittens, cats and puppies.

EFA Oil is a combination of essential fatty acids containing omega 3s, 6s and 9s, very beneficial for healing, especially the omega 3s. This is another must have product for animals with cancer.

(Although it is very unusual for cats to have yeast infections, they have been included just in case.)

The recipe for a 15-pound or under cat/dog/kitten/puppy:

100% Pure Colostrum powder: 1/2 teaspoon

Digestive Enzyme Complex powder: 1/4 teaspoon

PC CoQ10 capsule: 1/4capsule

Crystal Energy liquid: 1 squirt

EFA Oil: 1 teaspoon

The recipe for dogs/cats/puppies from 15 to 40 pounds:

100% Pure Colostrum powder: 1 teaspoon

Digestive Enzyme Complex powder: 1/2 teaspoon

PC CoQ10 capsule: 1/2 capsule

Crystal Energy liquid: 1 squirt

EFA Oil: 2 teaspoon

The recipe for dogs from 40 to 60 pounds:

100% Pure Colostrum powder: 1 1/2 teaspoon

Digestive Enzyme Complex powder: 3/4 teaspoon

PC CoQ10 capsule: 1 capsule

Crystal Energy liquid: 1 squirt

EFA Oil: 1 teaspoon

The recipe for dogs over 60 pounds:

100% Pure Colostrum powder: 2 teaspoon

Digestive Enzyme Complex powder: 1 teaspoon

PC CoQ10 capsule: 1 capsule

Crystal Energy liquid: 1 squirt

EFA Oil: 2 teaspoon

DIRECTIONS:

Open the PC CoQ10 capsule; mix in the other two powders; add the Crystal Energy; add the EFA Oil; mix all the ingredients thoroughly so all the powders are absorbed in the oil; then offer the 100% Pure Colostrum Cocktail on a plate as a treat and most of the time the animal will lick it up because it tastes great.

If not, then give with a spoon, a syringe or even on the end of your finger if necessary. Sometimes adding a little butter will make the animal more interested in it and give it some viscosity if you need to give it on your finger.

The 100% Pure Colostrum Cocktail should be given on an empty stomach...about 15-30 minutes before feeding. Depending on the severity of the problem it can be given from one to four times daily on an empty stomach...or if the animal is not eating at all it can be given more often. It will also help to stimulate the appetite.

It should be made up fresh each time it is given. It is most effective within the first 20 minutes after preparation.

If your animal is really debilitated, lethargic or not eating at all, then start by giving the 100% Pure Colostrum Cocktail in a very diluted form. Add enough purified water that it will go through a syringe easily and give one full recipe. Then within 30 to 60 minutes make up another recipe and give it. This should be repeated as often as necessary throughout the day and night.

If your animal has cancer, double the amount of Digestive Enzyme Complex in each recipe.

In addition to the raw food program, the organic supplements and the 100% Pure Colostrum Cocktail, check your dog to see if s/he has stain or plaque on his/her teeth. If so, then Urtica Urens should be given once a day with food according to the suggestions in the information sheet.

Topically to give immediate relief to the itchy skin and paws, apply Silver Protein and/or No Fleas! as directed.
